

Q1. Related to “Annex 14 - CPSU forecasted usage (Forecast 2)”, sheet MCH DEV line 123, the total is the sum of quantity; in other sheets the totals are not the sum of the quantity but they are the amounts in euro.
Could you please indicate the amount in € as per other sheets?

A1. Please be informed that the value indicated was for the number of items and not the financial costs for the Devices at MCH. The total value of these items count to Euro 676,269.06.

Q2. Related to “Annex 14 - CPSU forecasted usage (Forecast 2)”, we noted that only two Health Centres have “PHARMA” consumptions (FHC and PAOLA). All other Health Centres have only “DEV” consumptions. Could you please confirm that the Health Centres don’t use medicines or could you integrate with medicines consumptions?

A2. As explained during the site visit carried out by both candidates to the Primary Health Care, the rest of the Health Centres get their pharmaceutical supplies from these two main Health Centres. These Health Centres are the ones mostly that make use of pharmaceutical treatments and in order to avoid wastages pharmaceutical supplies are managed centrally. This process would however not preclude that in the future this procedure would not change in order to have direct deliveries to each of the health centres, once the Client would have total visibility of stock movements and expires in order to limit wastages.
